# DECKING

## *New products* *New technology*

Unlike classical composite decking (1st generation), co-extrusion decking (2nd generation) performs much better on physical properties.

It's more waterproof, oil and stain resistant, dimensionally stable and durable.

With the latest technology we can make dual colors on a single board and more colors & finishes are available now.

*Create a leisure space  
isn't a luxury*

# DIY TILE

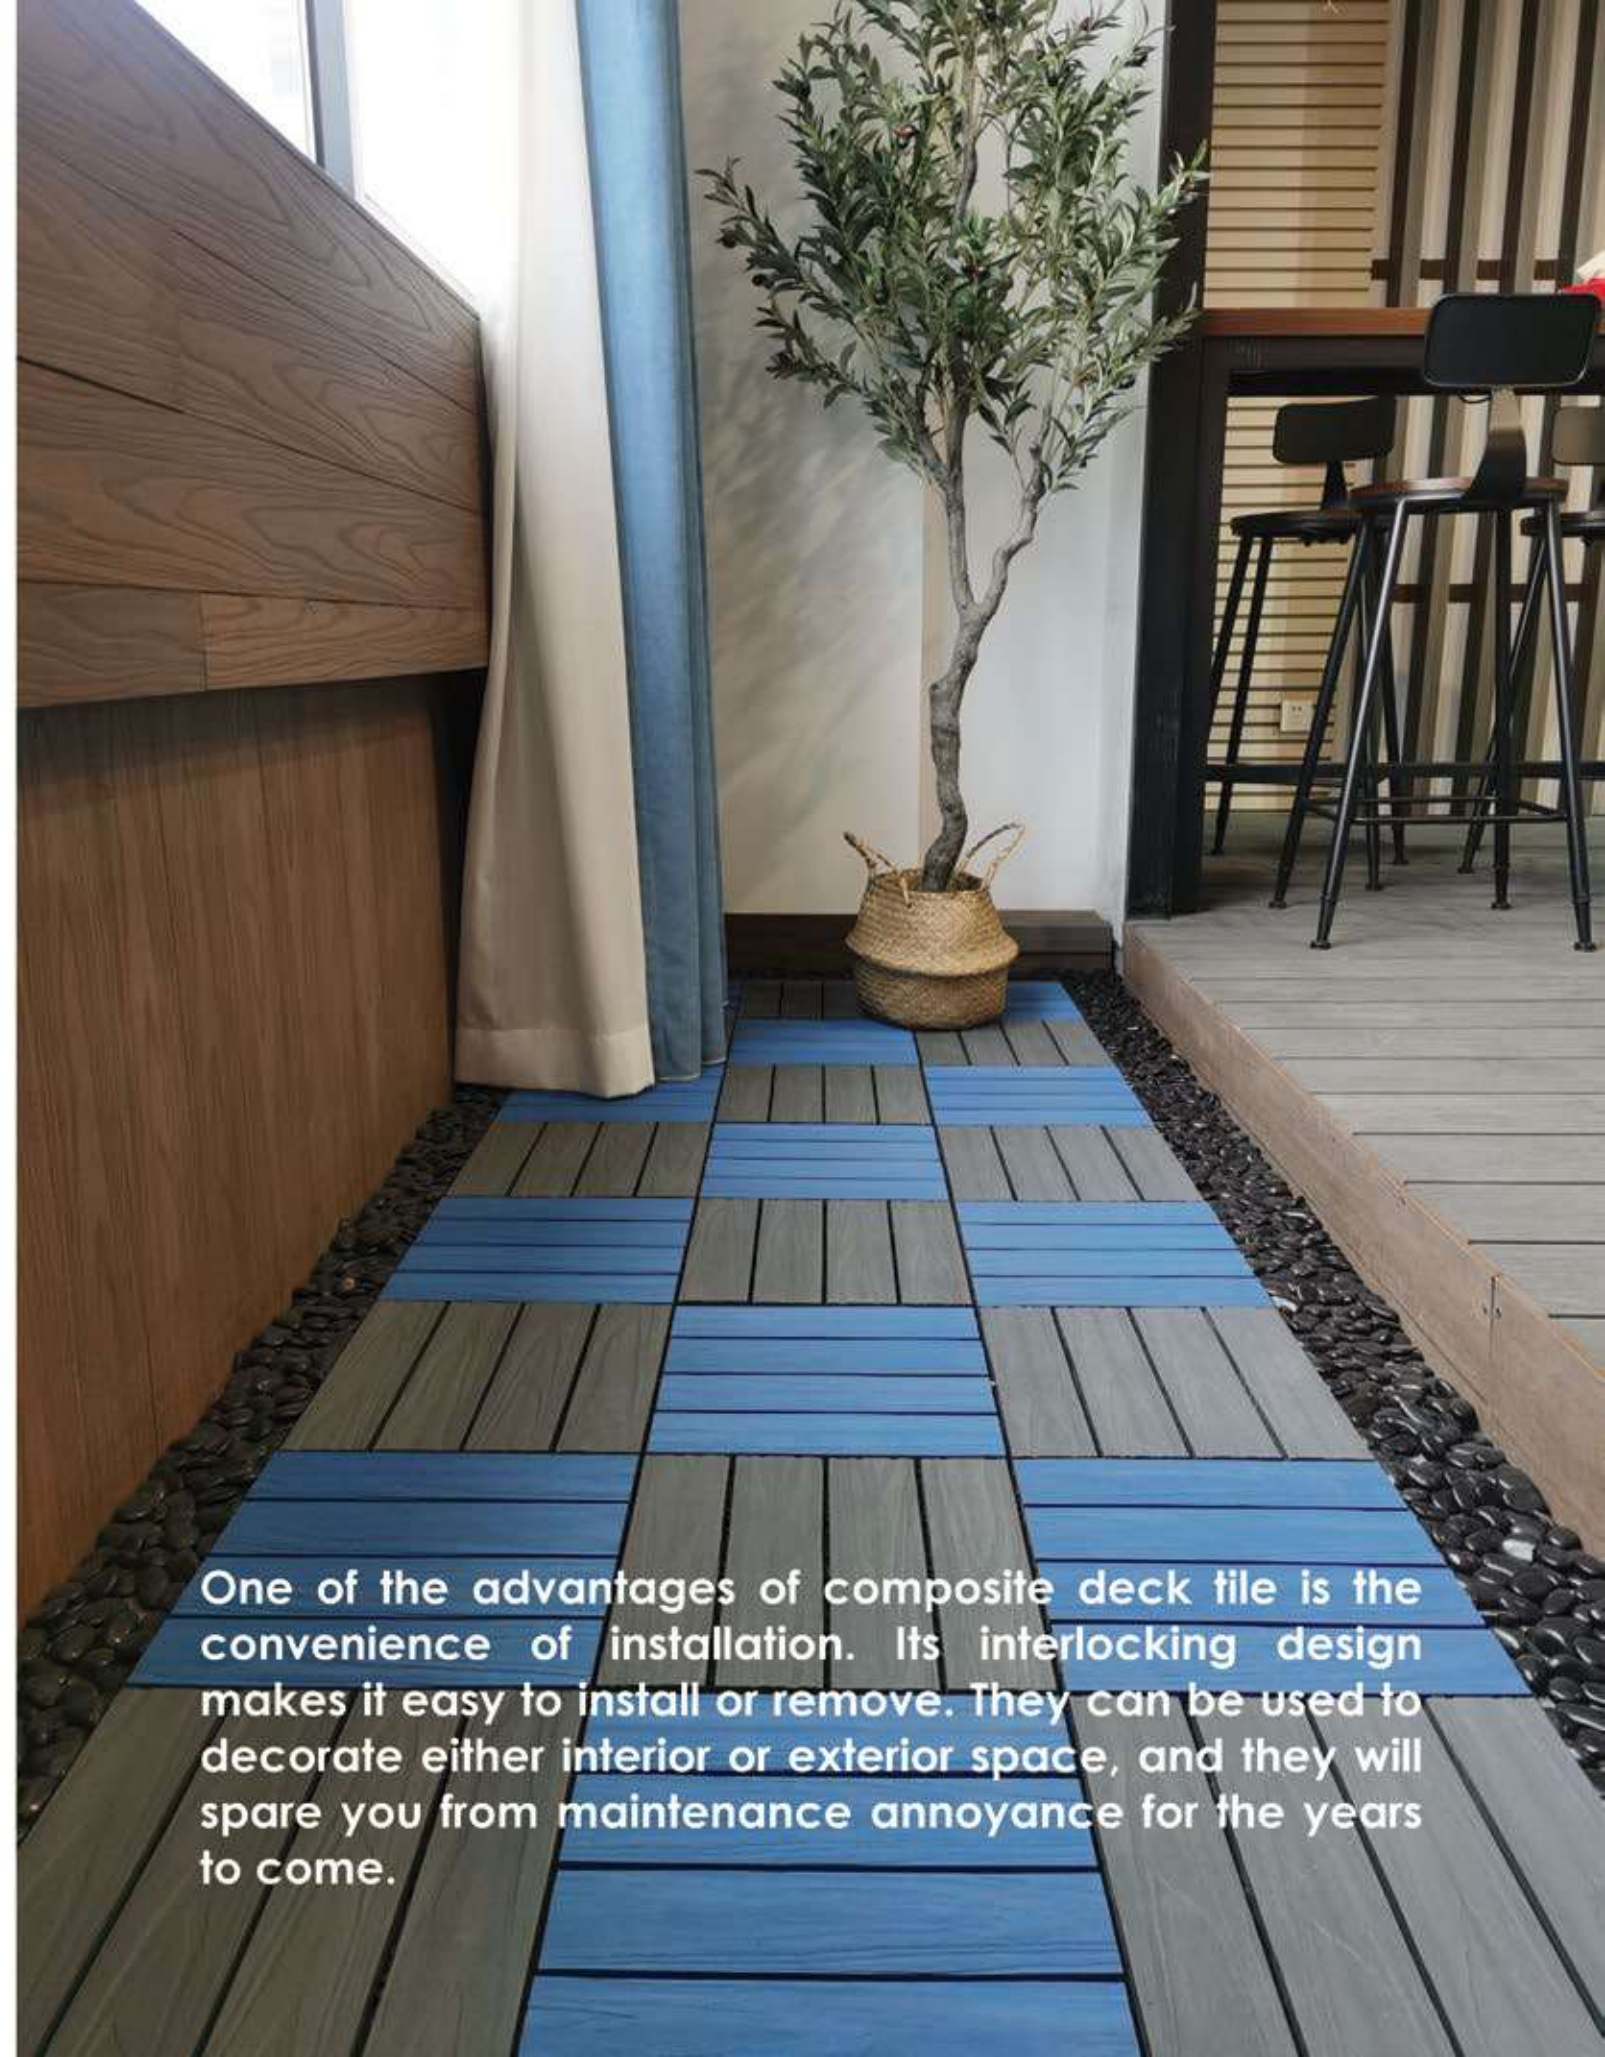

2 sides locking base / 4 sides locking base

With 2 sides locking base, you can install the deck tiles in a same direction easily.

With 4 sides locking base, you can install the deck tiles in either direction freely.

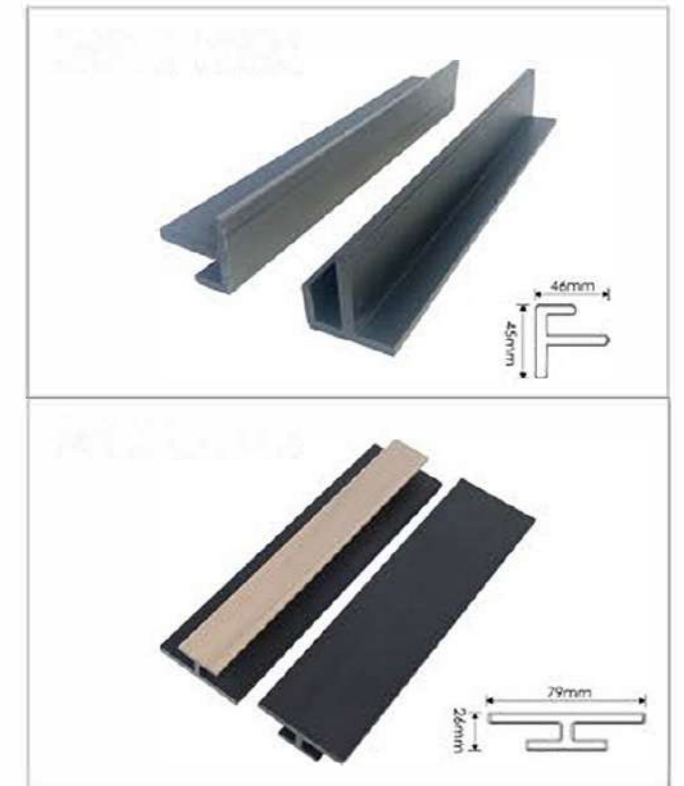

One of the advantages of composite deck tile is the convenience of installation. Its interlocking design makes it easy to install or remove. They can be used to decorate either interior or exterior space, and they will spare you from maintenance annoyance for the years to come.
