GREAT INVENTION

It is great invention to achieve two colors on one decking board, through improving technology, we can do one decking board under two different color and two different wood grain.

One color, one wood grain

Another color, wood grain also can be another one

Colorful wood™

Size: 23x 138 mm

Colorful wood™

It is the newest creation from our company, which is used the new co-extrusion technology but three layers, the first and second layers are under different colors, when brushing the surfaces the second layer color will be out, then mixing the first layer color, so finally the effect of mixing color come out.

This kind of board will make your garden more nature and attractive.

ABOUT COLOUR:

DECKING

*30 WOOD TEXTURE, BETTER ANTI-SLIP & WEAR-RESISTANT,
KEEPING THE WOOD NATURE, BUT BETTER THAN WOOD*

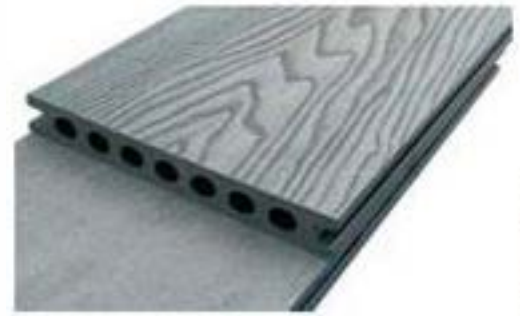

It is processed with exquisite craftsmanship, making the traditional wood plastic composite decking more natural, ensuring the natural wood grain, and improving the performances such as anti-slip, wear-resistant etc. It is a good wood composite decking that is worthy of choice.

GOOD WOODLOOK, EXCELLENT PROTECTIVE PERFORMANCE

GREAT TO INTEGRATE INTO THE NATURAL ENVIRONMENT.

NEVER STOP! It is our faith. Through our long-term experience and accumulation, we continue to make breakthroughs in wood composite products.

A variety of characteristic wood composite products have been developed, such as aluminum WPC, elastic co-extrusion WPC, and three layer co-extrusion WPC

.....

.....

Aluminum-WPC is used the newest co-extrusion technology to combine aluminum with wood plastic composite material, which is much stronger as steel material but under wood image, so it has changed the situation that wood plastic composite products can only be used as decorative materials, and greatly broadened the scope of use of wood-plastic composite products.

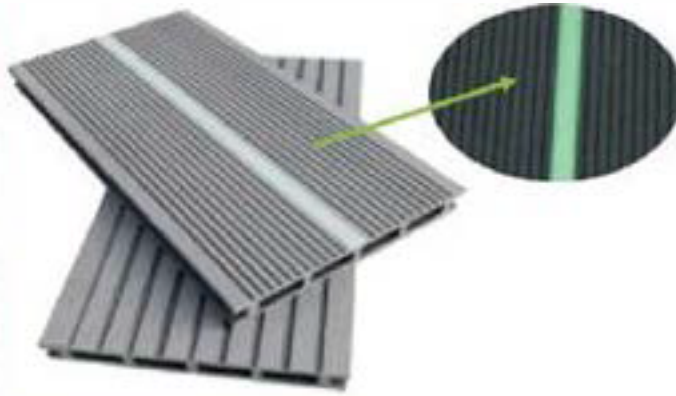

.....

Traditionally, the fence structure part needs to insert steel to keep safe, but it increases large cost, now the aluminum WPC solve the problem well.

Luminous WPC

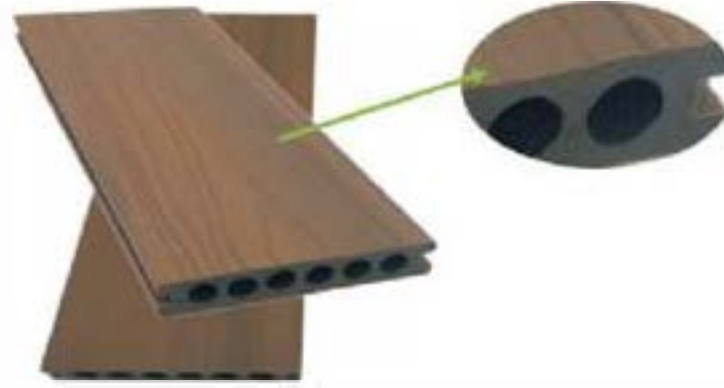

Size: 23x 138 mm

Luminous WPC is used the new co-extrusion technology, which perfectly combines the Luminous material with wood plastic composite material.

Fluorescent materials store energy by absorbing solar energy during the day and release energy in the form of light at night. This product can be applied to floors or fences in outdoor areas with warning

Elastic WPC

Size: 25x 140 mm

Elastic WPC is used the new co-extrusion technology, the first layer is the TPE (Thermoplastic Elastomer), which is core part is the normal wood plastic composite material.

TPE increases slip resistance on the board surfaces, at the same time it greatly improves the sense of touch. So the product is very good to use on the swimming pool, when you walk on it, you will feel natural and confirmable.

Fire-proof WPC

Customized fire-proof WPC

With the increasing usage of WPC, the safety of WPC is an important research topic.

After years of in-depth research and many tests, we have developed fire-proof WPC, and the current purchase quantity is increasing year by year, which highlights the importance that customers attach to the safety of WPC, so we will continue to conduct in-depth research to lead the future of the WPC industry.

SAFE & COMFORTABLE LONG LIFE LOW MAINTAINANCE COST

..... Fence & Rail

WOOD LOOK, MORE AVAILBLE COLOR,
CLASSICAL STYLING, SAFTY AND DURABLITY

Wood Composite Fences are a high-quality, durable alternative to recycled wood fences, they are stronger and easier to maintain than traditional timber fence, and they effectvely protect your privacy and security.

FENCING

21*157mm

About color:
The color of composite fence board is same as other Guofeng Glorious™

----TOP SALES FENCE & RAILS----

----- Other uses -----
Strong woody feeling, good protection effect, closer to nature

Wood-plastic composite board has the characteristics of wood, which can be planed, sawn, nailed. Due to its ease of processing and plasticity, wood-plastic panels have a wide range of applications and have to some extent replaced the use of wood or other materials
