SOLID FLOORING

Boasting character and beauty, real wood flooring is truly timeless and will look stunning in any space. These hardwood floors are incredibly durable, and will last a lifetime, so they're a sound investment for your home.

Solid wood flooring comes in a variety of finishes, from traditional to modern styles, all made with premium quality materials to ensure durability and longevity. Whether you're looking for a classic oak or walnut finish, or a contemporary distressed or grey finish, our collection has something to suit all tastes and budgets.

Birch

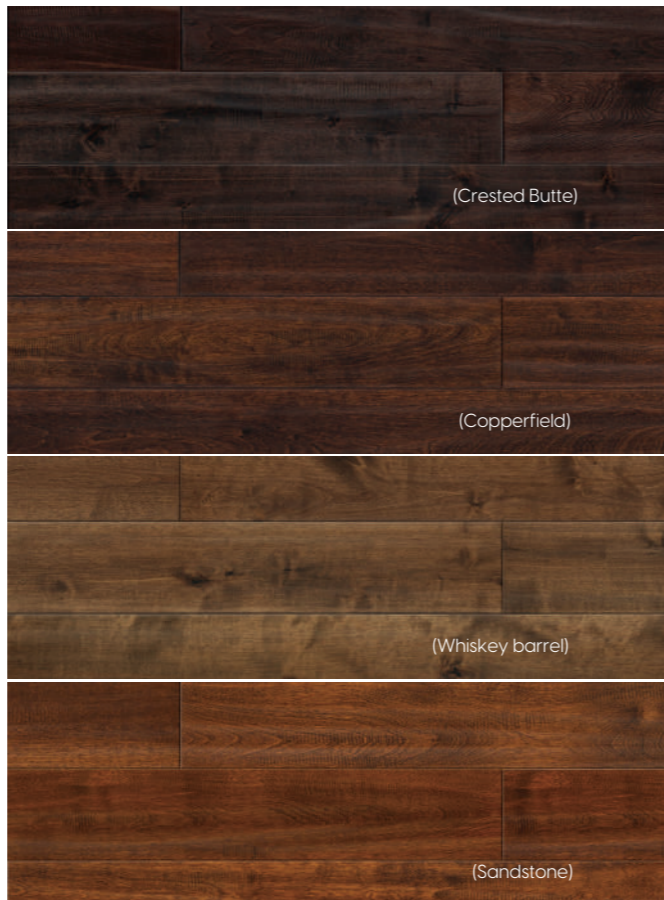

🌍 Origin:
Estonia / Latvia

🔧 Surface:
Hand-scraped

🛡️ Coating:
UV Lacquer

🏠 Grade:
ABCD

🌟 Gloss Level:
15 - 20°

02

ENGINEERED FLOORING

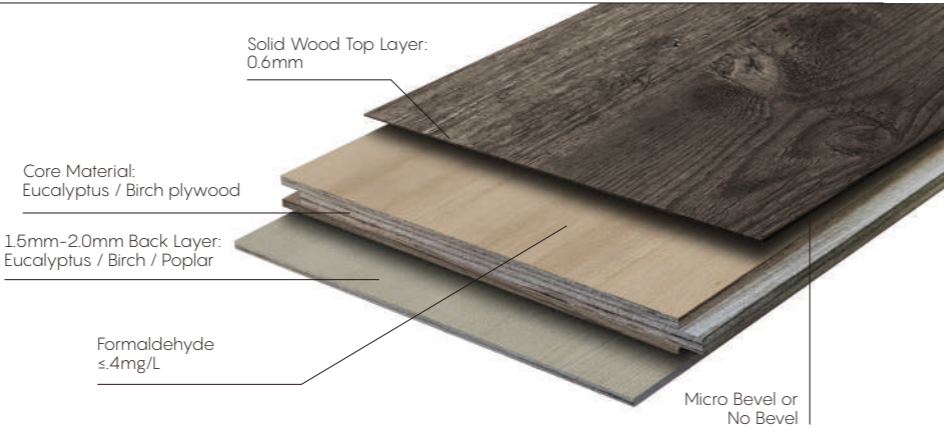

engineered flooring is a truly practical product, chosen for its strength, flexibility of installation and overall stability. It perfectly mimics a solid wood floor, but is actually made of three or more layers of real wood with an upper layer of genuine hardwood. It can be used in conservatories and in conjunction with underfloor heating.

With all the aesthetics of a real wood floor, but without any of the restrictions, real wood engineered flooring is a practical design choice for any home. When laid, a real wood engineered floor is virtually indistinguishable from a solid wood floor.

HDF FLOORING

HDF flooring is such an effective choice that it can be used in all kinds of spaces, either with or without underfloor heating. Simple and quick to install with the click systems, it's ideal for DIY projects. It looks great and is hardwearing so it will remain as pristine and beautiful as the day it was installed.

O5

ACCESSORIES

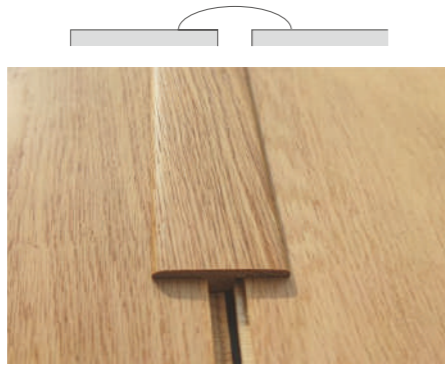

Flooring accessories are a vital part of ordering a floor. When purchasing flooring accessories, we always recommend you consult your fitter before making a purchase if someone else is fitting the floor for you. This will prevent any mistakes as the fitter will have an idea of how they want to lay the floor and what trims will be required to complete the job. We offer all the accessories that you might need and our team are on hand to advise and help you.

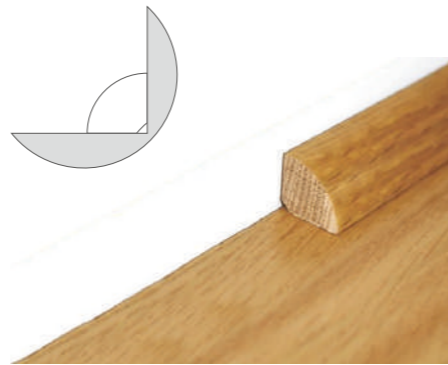

Skirting (Wall Base / Base Board)

Skirting that attaches to the wall and covers the flooring expansion gap (typically 1/4 gap or more). Can be combined with a Quarter Round when covering larger expansion gaps.

T-Molding

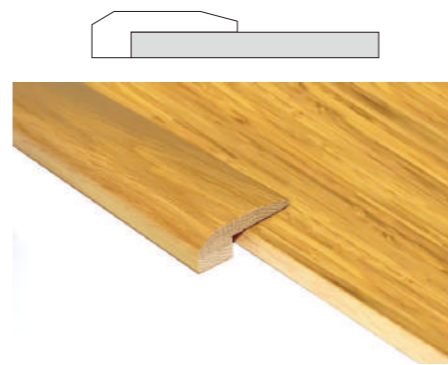

T-Molding is used for transition between floors of the same thickness. It is normally installed at doorways or areas when transitioning to a similar or same height floor.

Quarter Round / Scotia

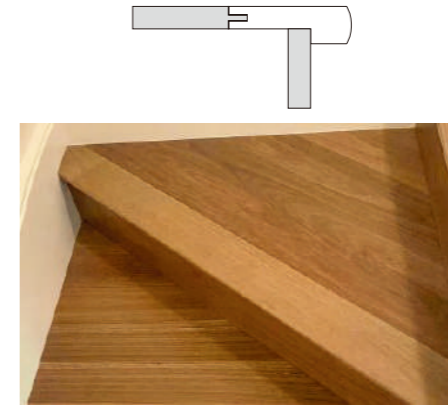

Quarter Round / Scotia is used to cover expansion joint between the floor and the wall, placed in front of an existing Skirting and covers the expansion gap. Required with many floors. This can be used as an alternative to Skirting.

* Material, Profile, Size, Color can be ordered.

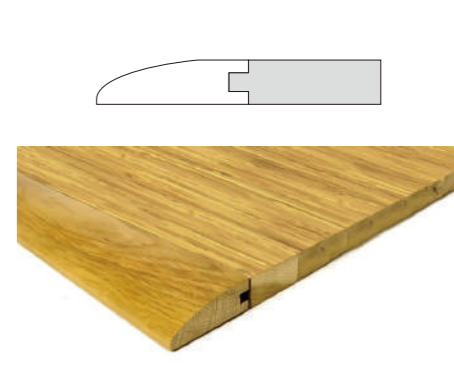

End Cap (Threshold)

End Cap is used in doorway, at the sliding door, carpet, masonry (fireplace) and other exterior floor jambs etc., to join flooring at different height, in front of adjacent sills, tiles or other raised surfaces or platforms.

Stair Nose

Stair Nose is used for installation on the front edge between the raise and step, this allows you to install the flooring on your stairs. Use this on the edge of the stair tread to provide a curved wrap and build the rest of the step out of the new flooring material itself.

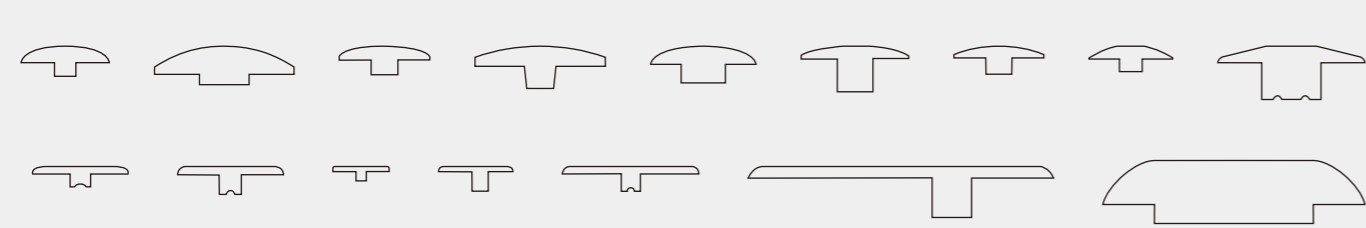

Reducer

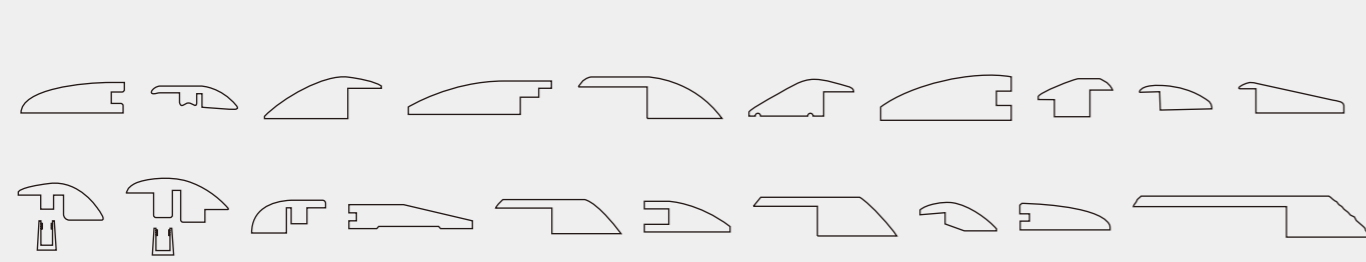

Reducer is used for transitioning down to adjoining lower floors, to provide smooth transition of floor covering of different heights eg, connecting hardwood floor with carpet, or tiles.

* Material, Profile, Size, Color can be ordered.
