LAMINATE FLOORING STRUCTURE DISPLAY

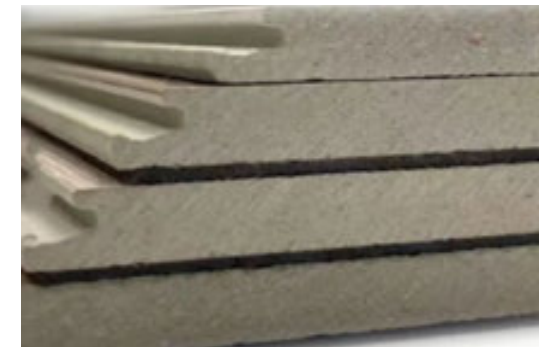

ANALYSIS OF LATCH MATERIALS

INSTALLATION MODE DISPLAY

Click lock system

Laminate flooring is known to be a floating floor. When the planks click together, they form one flat and seamless surface. This entire surface floats on top of the subfloor. It is crucial to focus on the locking system during installation and being sure that every plank is well locked, since this is what gives the flooring strength and stability.

THREE ADVANTAGES

Effective fire and flame retardant

Measured 300° high temperature burning
No effect on the floor surface

Easy to manage No maintenance

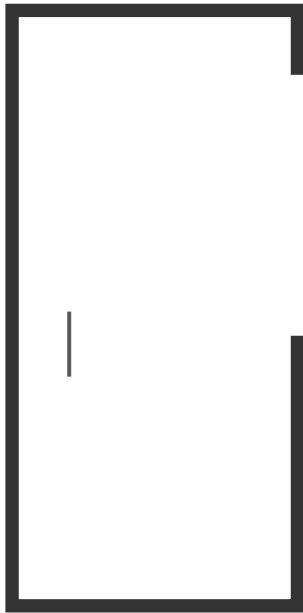

Synthetic diamond surface, more resistant to stains
Imported high-definition decorative surface,
no fade for 20 years

EUKA Smart lock

Achieve seamless installation without glue
600 kg of transverse tension, no seam, no deformation

Single chip specifications: 1219 x 200 x 12mm
Base material density: 830kg/m³
Environmental protection grade: E1

Single chip specifications: 1219 x 200 x 12mm
Base material density: 830kg/m³
Environmental protection grade: E1

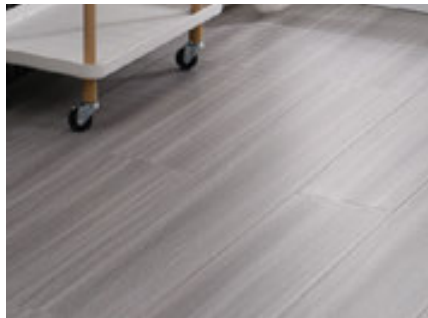

Single chip specifications: 1219 x 200 x 12mm
